Virginia Stemhagen, President  
Learning Harbor, Inc.

To Whom It May Concern:

The Learning Harbor healthcare education system was instituted at Parker Home to ensure compliance with healthcare educational requirements for employees. The computer education system has successfully kept our employees educated on healthcare directives mandatory for working and caring for residents in Long Term Care and Assisted Living environments.

Our employees find the computer system user friendly and the educational modules easy to read and interpret. Employees who are not familiar with using a computer, or have limited computer skills can easily be trained to use the Learning Harbor.

The Learning Harbor computer education system meets the employee educational requirements of the Occupational Safety and Health Administration and the New Jersey Department of Health and Senior Services. In addition, we have found that modules can be added to the system and/or customized to meet the needs of Parker Home.

Healthcare employee educational requirements are numerous. The Learning Harbor can help to streamline the education process and bring your organization into compliance.

Sincerely,

Lisa Slater, RN  
Director, Professional Education
